

# E-shop framework

## Specification

## Table of Contents

1. Introduction
2. Usecases
3. Entity relationship diagram

## 1. Introduction

This document can be used as specification for e-shop framework. Application should provide basic e-shop functionality as managing:

- products
- products categories
- files – images (additional information for products)
- invoices
- orders
- users

Framework should handle and store several information about warehouse state. Application is divided to two main parts, frontend and backend. Only authorized users can access backend and change information stored. For each element (module) should be stored following data:

Users:

- username - name used as login
- password - user password
- email - user email

Products:

- name - product name
- price - price of product
- date from - date since the product is supposed to be in price list
- date to - date since the product is not supposed to be in price list
- on stock - if product is on stock
- photo - product image

Categories: they has hierarchical structure

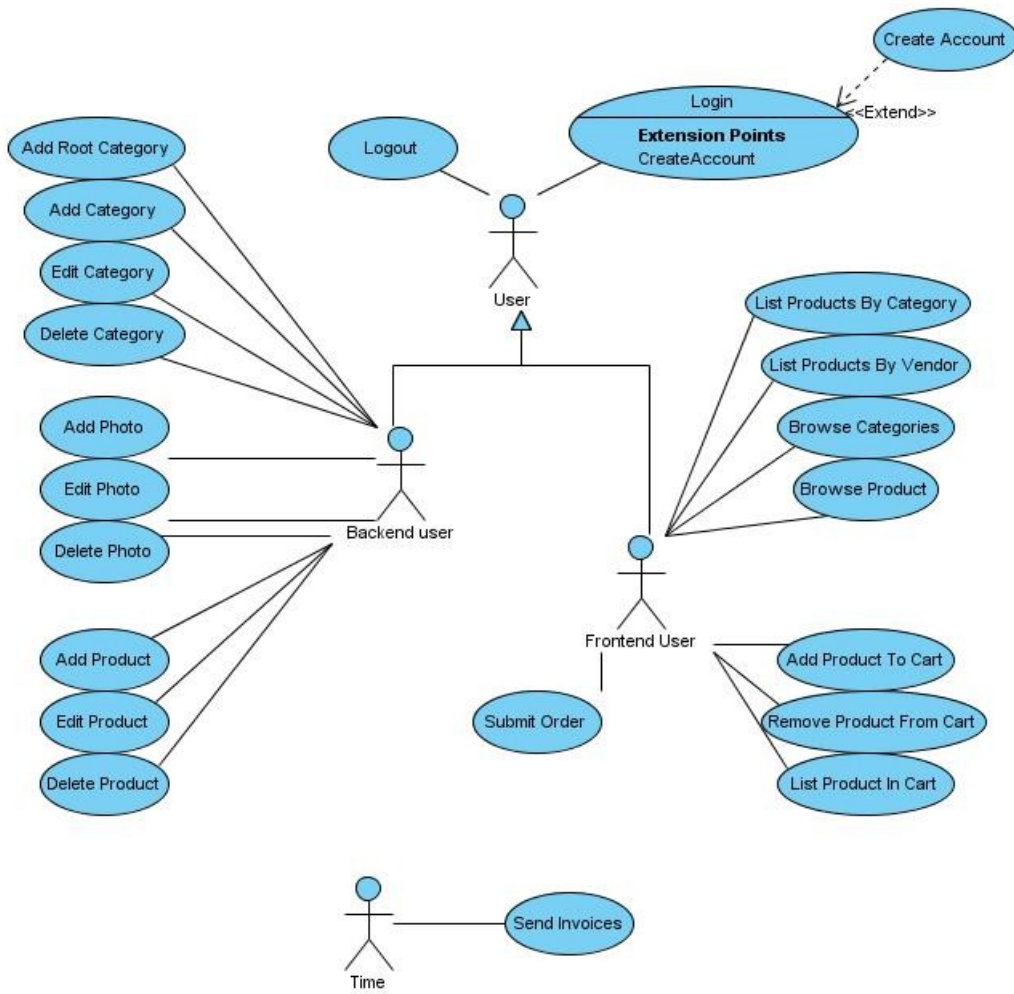

- name - category name

- parent - parent of category

Photos:

- name - name of photography
- description - short description about photography

## 2. Use Cases

## Add Category – Use Case

### Main

**Super Use Case**

<b>Author</b>	Martin
<b>Date</b>	16.3.2009 23:00:07
<b>Brief Description</b>	User adds some categories where later products will be assigned
<b>Preconditions</b>	User is logged in Some category have to be selected
<b>Post-conditions</b>	Category is created
<b>Flow of Events</b>	1. Select "add category" option 2. Display information form 3. While don't fill necessary category information 3.1. Display pre-filled form 4. Create category

## Edit Category – Use Case

### Main

**Super Use Case**

<b>Author</b>	Martin
<b>Date</b>	16.3.2009 23:07:43
<b>Brief Description</b>	User edit category parameters
<b>Preconditions</b>	User is logged in
<b>Post-conditions</b>	Category is updated
<b>Flow of Events</b>	1. Select "edit category" option 2. Display pre-filled form with category information 3. While don't fill necessary category information 3.1. Display again pre-filled form 4. Update category

## Delete Category – Use Case

### Main

**Super Use Case**

<b>Author</b>	Martin
<b>Date</b>	16.3.2009 23:09:04
<b>Brief Description</b>	User deletes category
<b>Preconditions</b>	User is logged in Some category have to be selected

<b>Post-conditions</b>	Category is deleted
<b>Flow of Events</b>	<ol style="list-style-type: none"> <li>1. Selects "delete category" option</li> <li>2. Ask for confirmation</li> <li>3. If confirm action <ol style="list-style-type: none"> <li>3.1 Delete category and dependencies, but not products assigned to category</li> </ol> </li> </ol>

## Add Product – Use Case
